

Entry-Level Website

We utilise HTML5 & CSS3 customisable frameworks to provide affordable website solutions

Bespoke, custom-built websites, especially those designed in a 'responsive' way i.e. providing for an optimised experience on all devices, come with heavy attendant cost which can be prohibitive for many businesses.

Websites built on HTML5 & CSS3 frameworks, in conjunction with pre-built and coded elements, provide an opportunity to develop a responsive, aesthetically-pleasing and functional website without all the attendant costs of more sophisticated custom builds.

From £595 + vat

Why?

- ✓ off-the-shelf elements; avoid custom design costs
- ✓ responsive design layouts available enabling optimal viewing experience across desktop, laptop, tablet and smartphone
- ✓ many pre-built designs / aesthetic options
- ✓ ability to adapt fonts, colours and features to provide custom website identity
- ✓ focus on website content
- ✓ upgrade path available later if required

Process

1. select design layout based on preferred aesthetics
2. set up site following discussion & creation of site plan; pages, required features
3. populate content
